VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP)DEPARTMENT: Executive Strategy & Enterprise Acquisition**SUBJECT:** The Whale Client Procurement & Retention SOP**PURPOSE:** To establish Veluse Agency's operational framework for transitioning out of the volatile SMB market and exclusively hunting, closing, and retaining Enterprise Med Spa "Whales." Selling to small businesses creates a churn factory based on their own volatility 1-4. To scale our AI-infrastructure to $100M+, we must go up-market, charge premium prices, and engineer our service to create lifelong revenue retention.

PART 1: THE UP-MARKET SHIFT (ACQUIRING WHALES)

The fundamental truth of B2B scaling is that we make more money because of *who* our clients are, not just because of *who* we are 5. We must ruthlessly target Med Spa franchises and enterprise clinics because the value we provide scales with the size of their business.
If Veluse Agency optimizes a sales funnel and increases conversion by 10% for a single-location clinic making $100,000 a month, we create $10,000 in value 5, 6. If we do the exact same work for a national Med Spa chain doing $10,000,000 a month, we create $1,000,000 in value 5, 7. We perform the exact same labor, but we provide vastly more value, allowing us to charge exponentially higher fees 5, 7.
To acquire these whales, we must shift our advertising and outreach from targeting the masses to utilizing "nodes of distribution" 8-10. We find the central hubs—such as medical device manufacturers, architectural firms, or enterprise software reps—that already service our $10M+ target clients, and we incentivize them to refer business to us 9, 11, 12. We focus on selling to the rich because they pay better, are less demanding, and achieve better results due to their existing infrastructure 13-17.

PART 2: THE "10X TO 1/10TH" TEST

Before pitching a Whale, our executive team must completely decouple our pricing from our costs. To break our limiting beliefs and engineer a completely un-commoditized Grand Slam Offer, we mandate the "10x to 1/10th Test" 18-21.
During offer creation, the team must ask two polar-opposite questions:

1. **The 10x Test:** If our enterprise clients paid us 10 times our current price (e.g., $100,000 to $500,000), what exactly would we have to provide to justify it? 18-22. We list everything we would do without worrying about scalability, such as flying out to their clinics, training their staff in person, or offering 24/7 dedicated support 20, 23, 24.
2. **The 1/10th Test:** If they paid us 1/10th the price, how could we still guarantee their success and make our product more valuable? 18-21.

By stretching our minds in both directions, we generate wildly different delivery vehicles 19, 25. We cross out the items with prohibitive hard costs, and what remains are highly valuable, high-margin solutions that we can bundle into an irresistible premium package 21, 26.

PART 3: JUSTIFYING THE $100K+ B2B OFFER

A six-figure price tag cannot be justified by simply offering "more hours" of consulting. Whales do not buy hours; they buy outcomes and efficiency. To justify a $100K+ enterprise offer, the Veluse Agency offering must be structured around the following framework:

- **Selling Time & Speed:** The wealthy pay for time above all else 17, 27-29. We must minimize the "Time Delay" in the Value Equation 30-33. If our competitor takes 6

months to deploy AI infrastructure, we guarantee deployment in 30 days. We promise that they will always be first in line, receive priority support, and get immediate responses 28, 29.
- **Zero Effort (Done-For-You):** Enterprise clients do not want to do the work; they want us to do everything 20, 34. We must minimize "Effort and Sacrifice" by providing a true "Done-For-You" (DFY) integration where we handle the build, the staff training, and the ad deployment without adding to their operational drag 20, 32, 34.
- **The Calculator Close:** We do not guess our pricing. We use a Calculator Close during the pitch to show them exactly how much money our infrastructure will generate or save them 35. If we identify $1,000,000 in missed revenue, charging $100,000 is simply requesting a 10% fraction of the value we are actively creating 35.
- **Risk Reversal (Performance Guarantees):** Rich people want guaranteed outcomes 17, 34. We justify the premium by offering a conditional service guarantee or a performance/profit-share model 36-38. We explicitly state that if we do not hit the projected KPIs, we will work for free until we do, aligning our incentives perfectly with theirs 36, 39, 40.

PART 4: THE 5-YEAR WHALE RETENTION PROTOCOL

Acquiring a $100K client is useless if they churn in four months. The enterprise value of Veluse Agency relies entirely on our "M12" (Month 12) retention and our ability to build a permanent customer base 41-44. To keep Whale clients for 5+ years, we implement the following retention protocols:

1. Extending the "Lookback Window" (Annual Billing) Churn is directly correlated to the frequency of billing 45, 46. If we bill a client monthly, they judge our value based solely on the last 30 days. If we have a slow month, they will cancel 46. By pushing for annual contracts (or annual prepayments), we extend the client's "lookback window" 46-49. Over a 12-month period, they will experience massive, undeniable wins that average out any slow weeks, making the renewal a no-brainer 47, 49. Statistically, shifting from monthly to annual billing drops average churn from 10.7% down to 2% 50, 51.

2. Separating One-Time vs. Consumable Value To prevent a client from feeling they have "graduated" from our service, we must structure our deliverables carefully. We charge a high upfront fee for the "One-Time Value" (the initial AI-bot buildout, the strategy audits, the heavy lifting) 52-54. We then charge a lower, ongoing fee for the "Consumable Value" (software licensing, CRM access, ongoing ad management) 52, 53, 55, 56. Because the recurring fee is a fraction of the upfront cost, it creates a massive price-to-value discrepancy, ensuring they never want to cancel their access to the ecosystem 57, 58.

3. Proactive Customer Success (CS) We must be as fast and aggressive in reaching out to existing customers as we are with new leads 59. If our data shows an enterprise client is only utilizing 3 out of our 10 features, we do not wait for them to complain. We proactively contact them and offer to train their team on the unused features, or we proactively downgrade their billing to a lower tier that matches their usage 59. Proactively downgrading a client builds unbreakable, ethical trust; they will realize we protect their money as fiercely as our own, guaranteeing they stay with Veluse Agency for a decade 59, 60.
