

VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:

Revenue Architecture & Direct Response Media

SUBJECT: The "Four-Step Persuasion" Copywriting Matrix

PURPOSE: To establish Veluse Agency's operational standard for engineering the "meat" of our advertisements, sales pitches, and copy. When selling high-ticket Med Spa AI infrastructure, we do not rely on vague promises or purely logical feature-stacking. We systematically corner the prospect's psychology by attacking their decision-making process from four distinct angles. This SOP dictates how we map our AI-infrastructure offer to the exact positive and negative consequences of the prospect's actions.

PART 1: THE 4-STEP PERSUASION MATRIX

When constructing the core value proposition (the "meat") of any ad or sales consultation, there is a mental framework that boils persuasion down to its absolute simplest, most potent form 1, 2. You have four different angles that you can hit on regarding any action you want the prospect to take 1, 2.

The complete matrix is defined as follows:

1. **More Good Stuff (Action):** You are going to get more good stuff if you do the thing we want you to do 1, 2.
2. **Less Bad Stuff (Action):** You are going to get less bad stuff if you do the thing we want you to do 1, 2.
3. **Less Good Stuff (Inaction):** If you do not do the thing we want you to do, you are going to get less good stuff 1-3.
4. **More Bad Stuff (Inaction):** If you do not do the thing we want you to do, you are going to get more bad stuff 1-3.

The only thing easier than taking action is not taking action at all 4. Therefore, we must aggressively sell against their inaction 3. We must clearly illustrate what the future looks like if things go well, and simultaneously paint the nightmare scenario of what the future looks like if things do not go the right way 5.

PART 2: THE VELUSE RULE OF SPECIFICITY (BREAKING DOWN THE TERMS)

Amateur agencies will use this framework and write lazy copy like, "If you buy our AI, you will make more money and feel better" 1, 4. That is not compelling copy 4.

To make this copy lethal, you must break down the terms and ask: *What does "feeling better" or "more good stuff" actually mean to this prospect?* 4. How would you know that this positive outcome had actually occurred in their daily life? 4. You must describe all the specific things someone might experience to denote that they feel better, without actually using the generic words "you're going to feel better" 6. Specificity is what makes copy potent 6.

Furthermore, we amplify these four angles by layering on the prospect's status 5. We do not just talk about the prospect; we talk about their status with regards to their spouse, their kids, their competitors, and their rivals across the street 5.

PART 3: APPLICATION TO VELUSE AI-INFRASTRUCTURE (MED SPA NICHE)

When our media buyers and sales executives script ads or pitches for Project BioOps (our AI automation infrastructure), they must forcefully drive the Med Spa owner through all four quadrants of the matrix.

Angle 1: More Good Stuff (If you install our AI)

- *The Concept:* You get the dream outcome.
- *The Veluse Copy Application:* We don't just say "you'll get more leads." We describe the moment. "Imagine waking up on a Tuesday, opening your calendar, and seeing eight new high-ticket Botox consultations booked while you were sleeping. Imagine the look on your local competitor's face when they realize you are capturing 100% of the after-hours market share while their clinic is closed." We show them gaining status and scaling effortlessly 5.

Angle 2: Less Bad Stuff (If you install our AI)

- *The Concept:* Decreasing effort, sacrifice, and operational pain.
- *The Veluse Copy Application:* "By deploying our AI booking agents, you eliminate the bad stuff. No more front-desk bottlenecks. No more paying a setter \$4,000 a month to poorly follow up with leads. You instantly eliminate the anxiety of watching expensive Meta ad clicks slip through the cracks because your staff took 4 hours to reply." We show them avoiding the exact friction points they currently hate 3, 4.

Angle 3: Less Good Stuff (If you refuse to act)

- *The Concept:* The opportunity cost of staying the same.
- *The Veluse Copy Application:* "If you refuse to adapt to AI infrastructure, you are kissing your growth potential goodbye. You will never experience the freedom of stepping away from the clinic because it relies entirely on your manual oversight. You will miss out on the profit margins required to open your second and third locations." We explicitly sell the *don't*—if you don't work with us, you keep not having the good stuff 3.

Angle 4: More Bad Stuff (If you refuse to act)

- *The Concept:* The nightmare scenario of the status quo.
- *The Veluse Copy Application:* "If you ignore this shift, the bad stuff compounds. You will continue to burn thousands of dollars a month on ads that lead to dead-end conversations. Your patient acquisition costs will skyrocket as AI-enabled clinics outbid you. You will remain chained to your phone, manually texting tire-kickers at 9:00 PM, watching your Med Spa slowly bleed out to younger, tech-enabled competitors." We vividly illustrate the nightmare future they guarantee for themselves through inaction 3, 5.
