

VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:

Revenue & Finance Architecture **SUBJECT:** The Upsell/Downsell Logic Tree & Blended Profitability

PURPOSE: To systematically map the post-sale conversion process, ensuring Veluse Agency and our Med Spa clients extract maximum revenue from every prospect interaction. By deploying calculated Feature Downsells and Rollover Upsells, we build a multi-tiered offer stack that mathematically guarantees we can outspend our competitors on customer acquisition.

PART 1: THE POST-SALE REVENUE DECISION TREE

The \$100M Money Model choreographs the sales process through a deliberate sequence: Attract, Up Front Cash, Upsell/Downsell, and Continuity 1. When a Veluse consultant or Med Spa closer is on the phone, they must never accept a simple "no." Instead, they must guide the prospect through a rigid decision tree designed to capture revenue at the prospect's exact level of buying power 2, 3.

The Sales Step-Down Protocol:

1. **The Full-Boat Anchor:** Present the highest, full-interest price first to establish the price anchor 4, 5.
2. **The Pre-Payment Upsell (Highest Discount):** Immediately offer a significant discount (e.g., 20% off) if the prospect pays in full today 4, 5. This positions the purchase as a benefit they earn 6.
3. **The Partial Down / Third-Party Finance (Medium Discount):** If they decline the pre-pay, step down to a partial payment (half down) or utilize third-party patient financing 4, 5.
4. **The Standard Payment Plan:** If they still resist, spread the full-interest price over a longer weekly or monthly payment plan 4, 5.
5. **The Duration Reduction:** If the payment plan is rejected, shorten the duration of the program and offer a fraction of the cost down 3.
6. **The Feature Downsell:** If they still say no, execute a Feature Downsell to change the scope of the deliverable 3, 7.
7. **The Free Trial / Continuity Hook:** If they refuse all paid services, drop to a free trial but require a card on file with a penalty if they fail to consume the service 3, 7.
8. **The Free Alternate Revenue Stream:** If they completely reject the core service, provide a free consultation or orientation where you can sell them a supplementary product (like skincare or supplements) 3, 8.

PART 2: FEATURE DOWNSELL VS. ROLLOVER UPSELL

The Feature Downsell (Saving the Sale) The cardinal rule of high-ticket sales is that you must never, ever lower the price of the exact same product or service 9, 10. If a prospect rejects a \$5,000 package and you magically drop the price to \$400 for the identical service, you completely destroy trust 10.

Instead, a Feature Downsell lowers the price by changing *what* the customer receives 7, 9, 11.

- **Reduce Quantity:** Offer fewer Med Spa sessions per month 11, 12.
- **Reduce Quality:** Substitute premium materials or access for standard versions 11, 12.

- **Remove the Guarantee:** Strip away the money-back guarantee for the lower price tier 11, 12. The guarantee costs you nothing to offer, but removing it forces the prospect to instantly realize its immense value 11, 12.
- **Shift the Effort:** Move the prospect from a "Done-For-You" service to a "Do-It-Yourself" template or software tier 7, 13.

The Rollover Upsell (Ascension) The Rollover Upsell is designed to pull a customer who bought a smaller, front-end package into your most expensive continuity program 7, 14. It works by taking the money the customer already spent and applying it as a credit toward their next purchase 7, 14.

- **The Execution:** If a client paid \$600 for a 6-week front-end challenge, you do not just sell them a standard gym membership afterward 14. Instead, you spread that \$600 as a \$50 per month discount off a 12-month continuity membership 14.
- **The Condition:** They only get to keep this "Rollover" discount if they commit to the full long-term contract 14, 15.
- **The Rules:** The new offer must be something better, new, or different than what they currently have 16. You must also add urgency, positioning it as a one-time offer valid only for today 16, 17.

PART 3: THE PRICING MATH OF "BLENDED PROFITABILITY"

When you stack Attraction, Upsell, Downsell, and Continuity offers, prospects will not buy linearly; they will skip around and buy the solutions that fit their specific needs, creating a "Value Grid" 18, 19. This offer stacking completely transforms the mathematical average of your revenue per user, creating "Blended Profitability."

The Math of Upsell Stacking: If you execute a free Attraction Offer, you can drastically liquidate your acquisition costs using a high-margin Upsell 20. If you give away a free item and 80% of those leads take a \$300 upsell that operates at 80% margins, you generate \$192 in profit for every free item given away ($\$300 \times 80\% \times 80\%$) 20. Taking 100 people and upselling 80 of them on a \$300 product yields significantly more cash and customer volume than just selling 30 people a standard \$99 item 21, 22.

The Math of Premium Anchoring: In any market, a fractal percentage of buyers possess disproportionate spending power 23, 24. If you have 100 customers, and 90 of them buy your standard \$100 package, you generate \$9,000 24. If you introduce a \$1,000 premium package and only the top 10 customers buy it, you add \$10,000 in revenue 24.

- Those top 10 buyers just doubled your overall business revenue 24.
- Because that premium tier requires virtually no new acquisition cost, it operates at near 100% margin, effectively tripling your net profit 24.

The Strategic Advantage: By layering these offers, even prospects who say "no" to the main service can generate revenue through downsells or complementary products 8. This system can skyrocket your 30-Day Cash Collected per customer from a mere \$75 to \$1,763 8, 25. When your blended profitability is this high, you possess the ultimate competitive advantage: you can spend \$1,500 to acquire a lead while your competitor goes bankrupt trying to spend \$100 26.
