

VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:

Revenue Architecture & Continuity Systems **SUBJECT:** The "Harvard Model" of Continuity & BioOps Ascension Ladder **PURPOSE:** To establish Veluse Agency's operational mandate for engineering infinite lifetime value (LTV) within our BioOps SaaS and Med Spa infrastructure deployments. Software and education fundamentally graduate their users. If we do not architect an enterprise ascension model that mirrors elite institutions like Harvard, our Med Spa clients will inevitably churn. This SOP defines the exact mathematical and psychological distinction between "One-Time Value" and "Consumable Value," and maps the 3-year ascension ladder for Veluse Agency.

PART 1: THE CONTINUITY ILLUSION & THE HARVARD DNA

Amateur agencies and software founders falsely believe that a 12-month payment plan equates to continuity 1. It does not. If a Med Spa owner signs a \$30,000 contract for our AI-booking system, spreading that payment out to \$2,500 a month does not create recurring revenue 1, 2. The moment our software is installed and the client understands the system, the educational and setup value drops to zero 2. They will cancel because they are paying for a past transformation, not future value 2, 3.

To build an unassailable continuity model, Veluse Agency must study Harvard University. Harvard does not rely on payment plans; they rely on elite brand positioning and an infinite ascension ladder 4, 5.

- **They have militant standards:** They reject the vast majority of applicants, meaning entry alone is a status symbol 4, 6.
- **They make no promises:** They do not guarantee you will be rich; they simply curate an experience for elite individuals 4, 7.
- **They accept that education graduates people:** Harvard knows you only need to take "Communication 101" once 8, 9. Therefore, they separate what they sell into two distinct columns: One-Time Value and Consumable Value 8, 10.

PART 2: ONE-TIME VALUE VS. CONSUMABLE VALUE

To prevent the "SaaS Desert of Churn," we must aggressively separate our BioOps deliverables into these two categories and price them according to the "Big Head, Long Tail" model 3, 10.

1. One-Time Value (The "Big Head"): This is the heavy lifting. This is the installation of the BioOps AI, the total rewiring of their CRM, and the foundational sales training for their front desk. Because the client retains this infrastructure forever, it holds massive, life-altering value 2, 11. We price this exceptionally high as a massive upfront setup fee (e.g., \$15,000 to \$25,000) 2, 3, 10.

2. Consumable Value (The "Long Tail"): This is the value that depletes and must be replenished. You cannot sell the same CRM setup twice, but a Med Spa always needs *new* ad creatives, *new* AI-model updates to handle evolving patient objections, and continuous community access 11, 12. We price this significantly lower (e.g., \$1,000 to \$2,500/month) so that the price-to-value discrepancy is so massive that cancelling makes zero logical sense 3, 13.

PART 3: THE 3-YEAR BIOOPS ASCENSION LADDER (THE DEGREE FRAMEWORK)

Harvard builds infinite continuity by realizing that after a student completes a Bachelor's degree, they can be sold a Master's degree. After the Master's, they are sold a PhD. After the PhD, they are sold a double PhD 5.

Veluse Agency will structure our Med Spa client journey through this exact multi-tiered degree framework. When they graduate from one problem, we immediately ascend them to the solution for their next, more complex problem 14.

YEAR 1: The BioOps "Bachelor's Degree" (Infrastructure & Activation)

- **The Problem:** The Med Spa has poor lead conversion, a manual front desk, and a leaky sales pipeline.
- **The Deliverable (One-Time Value):** The \$25,000 core BioOps AI-Booking installation. We rip out their old systems, install our autonomous AI agents, and train their staff 2, 8.
- **The Consumable (Monthly Continuity):** Access to the software, monthly ad-creative refreshes, and access to the "Veluse Tier 1" Skool community to ask technical questions 11, 12.
- **The Graduation:** By Month 12, their calendar is fully booked. They have "graduated" past the need for basic lead generation. If we do not ascend them, they will churn.

YEAR 2: The BioOps "Master's Degree" (Optimization & Expansion)

- **The Problem:** Now that they are at capacity, their new constraints are facility utilization, hiring, and profit margins.
- **The Deliverable (One-Time Value):** A \$35,000 strategic intensive. We deploy our "Yield Optimization" protocols. We train them on launching high-ticket, recurring membership models for their patients (moving away from one-off Botox sales), and we implement AI-driven hiring funnels to recruit top-tier injectors 15.
- **The Consumable (Monthly Continuity):** Continued education 16. They gain access to the "Veluse Director's Network"—a higher-tier mastermind exclusively for multi-seven-figure Med Spas. We provide weekly tactical teardowns of new aesthetic market trends and advanced AI conversational models 16, 17.

YEAR 3: The BioOps "PhD & Alumni" (Enterprise Scale & M&A)

- **The Problem:** They have a highly profitable, self-sustaining machine. The founder now wants generational wealth, which means scaling to 5+ locations, franchising, or preparing for a Private Equity buyout.
- **The Deliverable (One-Time Value):** A \$100,000+ "Enterprise Architecture" engagement 18, 19. We physically fly our executive team to their headquarters 20. We restructure their corporate org chart, audit their financials for a PE data room, and build the centralized management systems required to run a multi-location empire 21, 22.
- **The Consumable (Monthly Continuity):** They reach the "Alumni" status. We transition them to an equity-advisory model or a highly exclusive Board of Directors continuity (e.g., \$10,000/month). They get direct, 1-on-1 access to Veluse Agency's top partners, private deal-flow, and elite M&A networking 23, 24.

By defining the exact graduation point of every service, Veluse Agency does not lose clients to natural churn; we purposefully graduate them into higher-margin, higher-status enterprise tiers 5, 25.
