

VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:

Content Engineering & Media Buying (The Eyeball Factory) **SUBJECT:** The "Meat & CTA"

Content Structure & Four-Step Persuasion **PURPOSE:** To establish Veluse Agency's militant architecture for crafting high-converting content and advertising copy. To scale our Med Spa AI-infrastructure, our media buyers and content engineers cannot rely on creative guessing. We must deploy scientifically proven frameworks that logically and emotionally force the prospect to take action.

PART 1: THE "HOOK -> MEAT -> CTA" ARCHITECTURE

Every single piece of content and advertisement we deploy for Veluse Agency or our Med Spa clients must follow a rigid three-part architecture: the Hook, the Meat, and the Call to Action (CTA) 1-3.

- **The Hook:** This is the opening designed to violently capture the attention of the target audience and call out the specific avatar 3, 4. Because the hook dictates whether the rest of the ad will even be consumed, we model our hooks based on the best performing organic content across all industries 1.
- **The Meat:** This is the core value proposition and persuasive argument of the ad 2, 3. It is where we frame the benefits of our service and the costs of their current reality 5.
- **The CTA (Call to Action):** At the end of the advertisement, there must be a clear payoff or instruction telling the prospect exactly what they need to do next (e.g., "DM me the word ROI" or "Click the link below") 2, 3.

PART 2: THE "FOUR-STEP PERSUASION" MODEL (THE MEAT)

When scripting the "Meat" of the advertisement, we engineer persuasion using a strict four-step model based on the premise of adding or removing positive and negative outcomes 6. The structure operates on a (+ - - + - - +) matrix 7.

To compel a prospect to act, we must attack their decision-making process from four distinct angles 6, 8:

1. **More Good Stuff (If you ACT):** We explicitly detail the positive outcomes, feelings, and dream results the prospect will gain if they do what we want them to do (e.g., installing the Veluse AI booking bot) 6, 7.
2. **Less Bad Stuff (If you ACT):** We explain how taking action will eliminate their current pain points, operational drag, and frustrations 6, 7.
3. **More Bad Stuff (If you DO NOT act):** This is where we "sell the don't" by painting the "nightmare scenario" 5, 9. We explicitly state that avoiding our solution means they will experience even more negative consequences 6, 7.
4. **Less Good Stuff (If you DO NOT act):** Finally, we remind them that by refusing to take action, they are actively choosing to be deprived of the dream outcome they desire 6, 7.

The only thing easier than taking action is not taking action at all 10. Therefore, we must aggressively sell against their inaction 9. By explicitly mapping out the pain of the status quo, we make the prospect realize that doing nothing guarantees they will endure a worsening reality 6, 7, 10.

PART 3: ADVANCED COPYWRITING (THE 3 VECTORS OF VALUE)

To make the "Meat" of our copy even more potent, we do not use vague, cliché statements like "you will feel better" 10. Broad statements fail to convert 10. Instead, we must describe the exact, highly specific moments and visceral experiences that denote "feeling better" to our specific Med Spa avatar 10, 11.

We filter these specific experiences—both the "good stuff" we provide and the "bad stuff" they will suffer without us—through three primary vectors of value 9:

- **Speed:** How fast will this happen? We must emphasize the immediate speed of our AI-infrastructure versus the agonizing, delayed slowness of their current manual operations 5, 9, 12.
- **Ease:** How effortless is it? We must highlight the total lack of friction in our "done-for-you" offer compared to the grueling effort and sacrifice required by the alternative 5, 9, 12.
- **Risk:** How guaranteed is this? We remove the risk of our offer through ironclad guarantees while highlighting the massive financial risk of staying in their current, unoptimized situation 5, 9, 12.

By weaponizing this framework to frame the competitor or the status quo as "slow, hard, and risky" 5, and positioning the Veluse Agency solution as the ultimate provider of "more good stuff and less bad stuff" 7, we create an inescapable logical trap where buying is the only reasonable option.
