

## **VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:**

Executive Strategy & Operational Excellence  
Knowledge Base & Autopsy Protocol

**SUBJECT:** The "Failure Documentation" standard for processing, documenting, and weaponising failure. As we deploy complex AI-infrastructure and secure high-ticket Med Spa partnerships, we will inevitably face broken software deployments, lost "Whale" clients, and failed ad campaigns. This SOP dictates how our executive team will use Alex Hormozi's "Your Failures Can Make You Rich" and "Time Travel" frameworks to extract maximum enterprise value from our losses. We do not hide our scars; we document them to guarantee we never pay the same ignorance tax twice.

## **PART 1: THE "YOUR FAILURES CAN MAKE YOU RICH" FRAMEWORK**

Entrepreneurship is identical to a video game 1. When you play a new level, you die repeatedly because you do not know where the enemies or potholes are 1, 2. However, when you document the exact location of those hazards, you can run the level flawlessly the next time 2, 3.

To move forward at an elite speed, we must systematically record our errors. It is fundamentally worse to succeed and not know why than to fail and know exactly why 4. If you succeed blindly, you cannot recreate it; if you fail and understand the exact mechanics of the failure, you can course-correct and guarantee future success 4, 5.

To execute this, Veluse executives will maintain a continuous "Lessons and Failures" log—a dedicated thread or database where every misstep is recorded with a description of what we thought would happen versus what actually occurred 1, 6.

## **PART 2: THE "TIME TRAVEL" (SOLOMON SESSION) JOURNALING FRAMEWORK**

When a catastrophic failure occurs—such as losing a \$100K Med Spa contract or breaking a live AI-booking bot—human emotion and ego immediately cloud executive judgement. To neutralise this, we deploy the "Time Travel" journaling framework, internally referred to as a "Solomon Session" 7.

You must open a private document and initiate a chat thread with an 80-year-old version of yourself who has already accomplished every goal you possess 7. This future version of yourself has absolute context on your current situation but is entirely detached from the present-day emotional sting 7, 8. By journaling back and forth with this future self, you force an objective, emotionless review of the failure, bypassing your ego to extract the cold, tactical truth of what went wrong 7.

## **PART 3: THE 3 BENEFITS OF DOCUMENTING FAILURE**

Documenting and publicising our failures is not an exercise in self-pity; it is a calculated marketing and operational strategy. When we document our missteps, we unlock three massive benefits 9, 10:

1. **Crystallising the Lesson:** Telling the story makes the lesson stick 9. By taking the time to write down the failure, you contextualise the problem 10. This ensures that when a similar situation arises in the future, you immediately recognise the pattern and avoid the trap 10.

2. **Accountability to the Lesson:** When you document your failures and the lessons learned publicly (or company-wide), you become strictly accountable to those new standards 10. Your team and your audience will hold you to the new beliefs you claim to have adopted, forcing you to operate at a higher level 10.
3. **Monetising the Story:** You actually make money from your failures 10. When prospects see you openly dissect a failed ad campaign or a software bug, they identify with your transparency, values, and relentless pursuit of excellence 10. It builds unbreakable trust, leading them to want to do business with Veluse Agency 10.

## PART 4: EXECUTIVE EXECUTION SOP (THE AUTOPSY)

Whenever a significant failure occurs within Veluse Agency, the responsible executive must immediately execute the following Autopsy Protocol.

### Scenario A: A Failed Ad Campaign

- **The Autopsy:** Do not vaguely state, "The ads didn't work." You must isolate the exact point of failure. Did the Med Spa owners stop watching after 3 seconds (Hook failure)? Did they click but fail to book a call (Offer/Landing Page failure)?
- **The Documentation:** Log the hypothesis in the "Lessons and Failures" database ("We believed this creative would lower CPA"). Detail why it failed ("The creative was too highly produced and looked like corporate spam").
- **The Monetisation:** The Head of Marketing will immediately turn this failure into a piece of content: *"We spent \$10,000 on slick Med Spa ads last week, and they completely bombed. Here is exactly why ugly, raw content outperforms corporate videos."* We monetise the loss by using it to attract new clients.

### Scenario B: A Lost Whale Client (Enterprise Med Spa)

- **The Autopsy:** Execute a Solomon Session 7. Strip away your anger towards the client. Ask your 80-year-old self: *Did we set improper expectations? Did we fail to prove ROI fast enough? Did we let our communication lapse?*
- **The Documentation:** Record the precise operational breakdown that led to the churn.
- **The Monetisation:** Update our Standard Operating Procedures to ensure this exact scenario triggers an automatic red flag in the future. The loss of one \$100K client must be weaponised to secure and retain the next ten \$100K clients.

### Scenario C: A Broken Software Deployment (BioOps AI Failure)

- **The Autopsy:** Identify the exact gap in our engineering or onboarding pipeline. Was it a code limitation, or did the Med Spa staff simply not understand how to use the AI tool?
- **The Documentation:** Write the post-mortem. "We deployed the AI-voice agent, but front-desk staff kept turning it off because they didn't trust it. The failure was not in the software, but in the staff training."
- **The Monetisation:** We share this transparently with our active pipeline. *"Our first iteration of this AI-bot failed because humans didn't trust it. Here is the proprietary staff-training module we built to fix it, which you will receive on Day 1."* We use the past failure as proof of our current operational superiority.

By ruthlessly documenting our failures, Veluse Agency transforms every loss into a permanent, highly profitable enterprise asset.
