

VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:

Executive Operations & Deep Work Architecture **SUBJECT:** Extreme Productivity & The Founder's Schedule

MODULE: The 'Anti-Routine' & Time Blocking SOP **PURPOSE:** To establish Veluse Agency's operational mandate for executive time management and deep technical focus. Scaling our Med Spa AI infrastructure into an elite, high-ticket enterprise requires our executives to systematically protect their cognitive bandwidth. This SOP dictates the exact scheduling physics required to eliminate context switching, destroy "attention residue", and balance the dual requirements of a scaling CEO: building world-class tech and leading a world-class team.

PART 1: THE "ANTI-ROUTINE" PHILOSOPHY

Amateur entrepreneurs are easily distracted by the illusion of productivity, adopting complex, three-hour morning routines consisting of ice plunges, grounding walks, and gratitude journaling before they ever start working 1. This is a catastrophic waste of executive energy. If you cut out the three-hour morning routine and replace it with three hours of actual work, you will get significantly more done 1.

At Veluse Agency, our elite operators utilise the "Anti-Routine". The highest return-on-investment habit stack is waking up early, engaging in zero rituals, drinking coffee, and getting straight to work 2. True productivity is not achieved through addition, but through violent subtraction; when you remove everything else that does not matter, focus is the only thing that is left 3.

To execute the Anti-Routine, executives must enter a "Season of No" 4. This means saying no to everything that is not the priority 4. We stop treating weekends differently to weekdays, maintaining the exact same wake-up and bedtimes to protect our biological momentum 5.

We delete all social media from our phones, using computers strictly to post and manufacture content rather than to consume it 6, 7.

PART 2: THE MAKER VS. MANAGER PARADIGM

To structure an effective CEO calendar, we must understand that time management requires separating two fundamentally different working styles: the Maker and the Manager 8.

- **The Manager Schedule:** Managers divide their time into small 30-to-60-minute blocks 9. Their work depends on meetings where they direct others, collect data, unblock bottlenecks, and make operational decisions 9. To a manager, an empty time slot is a lost opportunity 10.
- **The Maker Schedule:** Makers (those building the Med Spa AI infrastructure, writing high-converting copy, or scripting sales protocols) require massive, uninterrupted half-day or full-day chunks of time 10. They do not work in 30-minute increments; they work "open to goal," meaning they work until the targeted outcome is achieved or their quality of output drops 11. To a maker, an empty calendar means full productivity 12.

The Danger of "Attention Residue" (The Zeigarnik Effect): When a CEO attempts to mix these schedules, disaster strikes. If a manager schedules a 30-minute meeting in the middle of a Maker's morning block, it destroys the Maker's productivity 13. Even if the meeting is short, the Maker suffers from the "Zeigarnik effect," a psychological phenomenon where the brain remembers and fixates on open loops and pending tasks 14. Anticipating the upcoming meeting creates "attention residue" that disrupts immersion, forces the Maker to watch the

clock, and completely removes them from their deep flow state 12, 14. A short meeting costs a manager one work unit, but it costs a maker an entire half-day of cognitive output 13.

PART 3: THE 4-TO-6 HOUR RULE (MORNING EXECUTION)

To prevent attention residue from destroying our AI buildouts, Veluse Agency executives must ruthlessly defend the first phase of their day.

The single habit that will get a founder furthest in life is working uninterrupted for the first four to six hours of the day on the things that have the highest leverage in the business 15. For Veluse CEOs, this means zero meetings and zero interruptions until noon 2.

During these first four to six hours, the CEO must ask: *"What is the one thing that, if it were true, all of my other problems would go away?"* 15. You must spend your entire block pouring your effort into making that one thing happen, ignoring the 20 other "urgent but not important" mini-priorities 15. If your Med Spa infrastructure has a core constraint, you spend 96 hours a month entirely focused on solving that single constraint 16.

PART 4: THE CEO HYBRID CALENDAR (BALANCING BUILD & LEAD)

As a CEO scaling a tech-enabled agency, you must operate as a Maker to build the infrastructure, and as a Manager to lead the sales and delivery teams. To balance this without cognitive bleed, we mandate the following daily and weekly scheduling rules.

1. Daily Separation (The 4-4-4 Split) If you are transitioning to full-time entrepreneurship, your day should be heavily segmented into deep-work blocks 3.

- **Block 1 (Maker Time):** The first four hours are dedicated to promotion and lead generation 3.
- **Block 2 (Maker/Manager Time):** The next four hours are dedicated to delivery, ensuring our Med Spa clients get the AI systems they were promised 17.
- **Block 3 (Maker Time):** The final four hours are dedicated to building the future, curating opportunities, and prioritising the highest-return actions 17.

2. Back-to-Front Meeting Scheduling (Manager Defence) When you must shift into Manager mode in the afternoon, you must strictly control how meetings are booked on your calendar to protect your Maker time 18.

- All administrative tasks, 1-on-1s, and team huddles must be pushed to the second half of the day (e.g., after 1:00 PM) 18, 19.
- **The Rule:** You must schedule your meetings from back to front 18. If your workday ends at 5:00 PM, your first booked meeting goes at 4:00 PM 20. If you have a second meeting, it goes at 3:00 PM 20. This ensures that your morning Maker block extends as late into the afternoon as possible, preserving a massive, continuous chunk of uninterrupted white space 18, 20.

3. The "Manager Day" (Weekly Consolidation) To achieve the ultimate level of Maker productivity, the CEO should aim to consolidate all Manager duties into a single day of the week 21.

- For example, designate Monday exclusively as your Manager day 19, 21, 22. You stack every single operational call, team Q&A, vendor meeting, and leadership alignment session into this one day 21, 23.
- This leaves the rest of your week completely empty 21. When your calendar is truly blank, you eliminate all attention residue, unlocking the limitless cognitive energy required to build a \$100M BioOps enterprise 24.
