

VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:

Executive Operations & Leadership **SUBJECT:** The "Buy Back 20 Years" Delegation

PURPOSE: To systematically eliminate the low-leverage, administrative drag of "humaning" from the schedules of Veluse Agency executives and our elite Med Spa clients. To scale our AI infrastructure deployments to \$100M, a founder's time must be aggressively guarded. This SOP dictates the exact mathematical framework for buying back an entire week every month, effectively giving the founder "two weeks for every week" to focus exclusively on high-leverage revenue generation 1.

PART 1: THE MATHEMATICS OF DELEGATION (THE ROI EQUATION)

Amateur entrepreneurs believe that doing their own chores saves them money, but in reality, wealthy individuals buy time, while poor individuals buy stuff 2, 3. To scale, founders must treat their personal time as the most expensive asset in the company.

We calculate the ROI of delegation using a strict mathematical equation. The average person spends roughly 96 hours a month on basic human maintenance: cleaning their house, cleaning their clothes, buying food, preparing food, and cleaning up 4-6.

You can outsource 100% of these tasks for approximately \$1,500 per month 4, 7, 8.

The Equation: $\$1,500 \div 96 \text{ hours} = \15.62 per hour 4.

If you are a Med Spa CEO or a Veluse Agency executive, and you possess the skills to generate more than \$15.62 an hour in your active business, doing your own laundry is a catastrophic financial loss 7, 9. If you take those 96 hours every month and redirect them into high-leverage activities, you not only make significantly more money, but you become more skilled at your job much faster 7, 10.

PART 2: THE 7 PERSONAL INVESTMENTS TO BUY BACK TIME

To manufacture an extra work week out of every single month, Veluse Agency mandates that founders systematically outsource their lives in the following seven stages:

1. Meal Prep & Groceries (Saves 13.5 hours/week) The average American spends 13.5 hours per week—nearly two full workdays—driving to the store, buying food, cooking, and washing dishes 11.

- *Execution:* Outsource this entirely by utilizing services like Uber Eats or pre-made meal deliveries 11, 12. At a cost of roughly \$750 a month, you completely remove food-related decision fatigue and labor from your cognitive load 11.

2. Laundry Service (Saves 4 hours/week) Sorting, washing, waiting on cycles, and folding clothes burns half a workday every single week (16 hours per month) 13, 14.

- *Execution:* Utilize a drop-off wash-and-fold service. At \$1.50 to \$2.00 a pound, this costs the average person roughly \$60 to \$80 a month to completely eradicate laundry from their schedule 14. (*Pro-tip: Wear the same "uniform" daily to eliminate decision fatigue entirely, making you out the door in 5 seconds* 15).

3. House Cleaning (Saves 6-7 hours/week) Deep cleaning bathrooms, floors, and daily tidying consumes 6 to 7 hours a week, totaling up to 26 hours a month 15, 16.

- *Execution:* Hire a recurring cleaning service. For \$200 to \$300 a month, you buy back three full workdays previously lost to scrubbing floors 16.

4. Sleep Environment Optimization (Increases Hourly Output) While this does not explicitly add hours to your day, it dramatically increases your cognitive output per hour by allowing your brain to clear accumulated waste effectively during REM sleep 17.

- *Execution:* Invest ~\$200/month (financed) into a high-end temperature-regulated mattress, absolute blackout curtains, and earplugs 18, 19. You will live longer, make sharper executive decisions, and possess the relentless energy required to scale 20.

5. Landscaping & Property Maintenance (Saves 8 hours/month) Mowing the lawn, pulling weeds, and cleaning gutters is a low-leverage distraction that consumes about 8 hours a month 21.

- *Execution:* Hire a landscaping crew for roughly \$300 a month 21. You can only buy your time back once, making this a permanent, high-yield trade 20.

6. A Driver / Ride-Sharing (Saves 30-50 hours/month) The average commute steals 1.5 hours of focus every single day 22.

- *Execution:* If you make over \$50 an hour, utilize Uber or driverless fleets 23. For an expected cost of \$600 to \$1,000 a month, you transform dead transit time into highly productive "Manager" time where you can clear Slack channels, answer emails, or push projects forward 22, 24.

7. Semi-Private / Private Aviation (Saves Days of Transit) Commercial air travel introduces massive terminal friction, TSA lines, and delays that destroy executive momentum 24.

- *Execution:* As your net worth scales, utilize semi-private or private flights to bypass commercial hassle, allowing you to reclaim entire days of your life back for high-leverage execution 24.

PART 3: THE FOUNDER'S DIRECTIVE (APPLYING THE LEVERAGE)

If you implement these seven investments, your total cost will be approximately \$3,100 a month (or closer to \$2,000 if you do not travel heavily) 25. In exchange, you buy back roughly 45 hours a week of your life 25.

However, buying this time back is useless if you waste the reclaimed hours on low-leverage distractions 26. This newly acquired time must be ruthlessly redirected into the core constraint of the business 9. At Veluse Agency, we mandate that the founder spends 4 uninterrupted hours every single day on the exact inputs that drive revenue: promoting the business, acquiring leads, or optimizing the Med Spa AI infrastructure 9, 27, 28.

By eliminating the \$15/hour tasks, you pull the future forward. You stop operating as an employee of your own life and start operating as the ultra-wealthy architect of a \$100M enterprise 9, 29.
