

VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:

Executive Strategy & Human Performance **SUBJECT:** The "Gym & Body" Executive

PURPOSE: To establish Veluse Agency's militant standard for physical discipline as a direct prerequisite for enterprise scaling. When we deploy elite AI-infrastructure into 7- and 8-figure Med Spas, we demand peak operational endurance from both our internal team and our partners. This SOP outlines the mathematical correlation between physical fitness and high-ticket sales performance, defines the psychological trap of "Hedonistic Adaptation," and dictates how we weaponize intentional physical suffering to survive the inevitable "Valley of Despair" in business.

PART 1: THE CORRELATION (PHYSICAL DISCIPLINE = BUSINESS ENDURANCE)

At Veluse Agency, we view physical fitness not merely as a health metric, but as the ultimate lead indicator of executive competence and sales dominance. If you take two groups of men—one completely out of shape and one highly fit—and test them across ten different tasks, the in-shape group will consistently outperform the out-of-shape group 1, 2. They possess more energy, maintain sharper focus, and mathematically close a higher percentage of sales deals 2.

Your physical condition is a public ledger of your discipline. Controlling what you put into your mouth is the most basic, fundamental test of human discipline 2. If a founder or closer cannot conquer their own basic biology, they will inevitably crack under the pressure of scaling an enterprise.

However, amateur operators confuse doing what they *like* with actual toughness. Posting a photo at the gym at 4:00 AM does not make you tough if you inherently enjoy lifting 3. True mental toughness is doing the grueling, unsexy work you hate—like working cold leads, executing follow-up sequences, and mastering your sales scripts 3, 4. The gym is simply the foundational proving ground where the muscle of frustration tolerance is built.

PART 2: HEDONISTIC ADAPTATION & THE SHIFTING BASELINE

To scale a \$100M+ operation, Veluse executives must fundamentally understand the psychological framework of "Hedonistic Adaptation" (or hedonic adaptation) 5, 6.

Hedonistic adaptation dictates that humans rapidly get used to pleasure and positive circumstances 6. If you hit a massive financial milestone, you will experience a short spike in subjective well-being, but you will quickly return to your emotional baseline 5, 7. You habituate to the good, but unfortunately, you still suffer through the bad 5, 8.

While humans can also adapt to pain, the lethal reality of scaling a business is that you do not adapt to pain if the pain constantly changes in intensity or variety 6. In the early stages of a Med Spa, the pain is obscurity; later, the pain is poor talent, operational bottlenecks, or lawsuits 9. Because the nature of the pain is always morphing, entrepreneurship feels like a perpetual state of suffering 10, 11. If you expect the business journey to eventually become "easy" or purely pleasurable, you are deluding yourself and will quit the moment a new variety of pain is introduced 5.

PART 3: THE "CHRIS BUMSTEAD" PROTOCOL & FINDING THE PAIN

To combat the shifting pains of business, we must voluntarily subject ourselves to extreme physical discomfort to elevate our baseline tolerance.

Alex Hormozi's leg training session with 6x Mr. Olympia Chris Bumstead perfectly illustrates this executive mandate. In the gym, growth does not come from avoiding the weakest, most painful parts of a movement; it comes from spending maximum time under tension precisely in those agonizing positions 12, 13. When discussing muscle growth, elite bodybuilding coach Milo Sarcev explicitly yells, "Find the pain!" 14, 15. You must seek out and stay in the pain because that physical agony is the exact mechanism that forces the muscle to adapt and improve 14, 16.

If you know that hitting your hand with a hammer (or enduring a brutal workout) directly yields growth, the pain itself transitions into a positive reinforcer 17, 18. You begin to smile through the broken glass because you know the suffering is purchasing your future capability 17, 19.

PART 4: SURVIVING THE "VALLEY OF DESPAIR"

We weaponize this physical pain tolerance to survive the most dangerous phase of business: The Valley of Despair.

When launching a new AI-infrastructure initiative or overhauling a Med Spa's sales process, the entrepreneur will pass through five distinct psychological phases:

1. **Uninformed Optimism:** Excitement born from ignorance 20, 21.
2. **Informed Pessimism:** The realization that the work is much harder and more complex than anticipated 20, 21.
3. **The Valley of Despair:** The lowest point, where the work sucks, the results are invisible, and the urge to quit is paramount 20, 21.
4. **Informed Optimism:** You figure out the mechanics and see a viable path to winning 21.
5. **Achievement:** You hit the target 21, 22.

The vast majority of operators hit the Valley of Despair, quit, and start over at "Uninformed Optimism" with a shiny new business idea—dooming themselves to an endless loop of failure 21, 23.

By intentionally suffering in the gym, we train our central nervous system to endure high-friction, low-reward environments 24, 25. When a Veluse Executive or Med Spa partner hits the Valley of Despair, they do not panic. Because they have spent years failing under heavy barbells and deliberately seeking out physical pain, their frustration tolerance is highly developed 24, 26. They recognize the Valley of Despair simply as the "working reps" of business 27. They lower their heads, endure the agonizing repetitions without immediate reward, and eventually cross the threshold into Informed Optimism and Enterprise Achievement.
