

VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:

Executive Strategy & Enterprise Sales
Reciprocity Horse Trading

SUBJECT: The 80-Point Deal Variable Matrix &
PURPOSE: To establish Veluse Agency's elite negotiation protocol for closing high-ticket B2B deals and strategic partnerships in the Med Spa sector. This SOP dictates how we eliminate the catastrophic practice of discounting prices by weaponizing non-price deal variables, allowing us to construct highly favorable, profitable agreements without ever compromising our core pricing integrity.

PART 1: THE CORE RULE OF NEGOTIATION (DO NOT NEGOTIATE WITH TERRORISTS)

At Veluse Agency, our foundational rule for closing enterprise Med Spa deals is this: We never change the price to close a sale 1, 2. If a client sees you change your price for them once, they will fundamentally believe that every price you have is negotiable, and they will tell everyone else in the industry that your prices are soft 2, 3.

When a prospect asks, "Can you do it for less?", our default psychological re-anchor is to reply, "We could do it for more" 1. This counter-anchors the negotiation and triggers a fear of missing out, often resulting in the prospect immediately accepting the original price 2.

We do not discount; however, we *do* change the terms 2. To maintain our pricing power while still getting the deal done, our executives rely on a "deal sheet" containing roughly 80 different variables that can be altered to make an offer more compelling 4. By moving these flexible levers, we construct deals that fit the exact needs of our partners without sacrificing our margins 4.

PART 2: THE 80-POINT VARIABLE MATRIX (NON-PRICE LEVERS)

To effectively trade terms, we must break our offerings down into as many different pieces as possible 5. We filter these variables through the four core drivers of the Value Equation to identify exactly what we can offer or withhold in a B2B negotiation 5, 6.

When structuring an AI-infrastructure deployment or Med Spa marketing partnership, Veluse executives must pull from the following non-price levers:

1. Speed (Time Delay Variables):

- **Deployment Timeline:** Can we deliver the infrastructure faster (e.g., 30-day close versus a 90-day close)? 5
- **Priority Access:** Can we offer "skip-the-line" priority support or a dedicated Slack channel with guaranteed response times? 7
- **SLA Response Times:** Adjusting the exact hour-count for technical support response.

2. Ease (Effort & Sacrifice Variables):

- **Fulfillment Scope (DFY vs. DWY):** Are we doing it completely "Done-For-You," or are we down-selling to a "Done-With-You" model where their staff takes on the heavy lifting? 8, 9
- **Furnishings/Extras:** Including expensive, high-friction add-ons at no extra cost (e.g., providing the hardware, tablets, or existing marketing assets so they don't have to build them). 5, 10
- **Training & Onboarding:** Adding on-site corporate training versus remote video modules.

3. Risk (Perceived Likelihood of Achievement Variables):

- **Performance Guarantees:** Who is taking on more risk in this situation? We can shift the risk by adding or removing conditional money-back or performance guarantees 5, 6.
- **Exclusivity:** Offering geographic exclusivity (e.g., "We will not work with another Med Spa within a 20-mile radius").
- **Lead Times & Break-up Fees:** Establishing rigid 6-to-12 month notification requirements for contract termination, paired with severe breakup fees to protect our downside 11.

4. Financial Structure (Payment Terms):

- **Cash vs. Financed:** We can alter whether they pay 100% cash upfront, or if we utilize third-party financing and payment plans 2, 5.
- **Commitment Length:** A lower monthly fee in exchange for a locked-in 12-month or 36-month contract 12.
- **Equity/Rev-Share vs. Flat Fee:** Structuring the deal to include a percentage of upfront cash, a percentage tied to performance, or equity vesting over a multi-year period 13.

PART 3: RECIPROCITY "HORSE TRADING"

Because people are naturally reciprocal, they believe that if they are given a concession, they must give something back in return 14, 15. However, the key to elite negotiation is trading concessions in a way that is highly advantageous to us 16.

Because the unstated assumption of most prospects is that a deal only consists of price and deliverable, bringing our 80 different variables to the table gives us an overwhelming tactical advantage 4.

The Execution of Horse Trading: If a Med Spa prospect demands a concession on "Ease" (e.g., they want us to completely run their sales team for them), we do not simply agree. We trade. We might say, "I can absolutely accommodate that level of Ease, but to do so, I need a concession on Risk and Speed—I need a 12-month unbreakable commitment and 100% of the cash paid upfront" 5, 6.

Having 80 variables allows us to continuously make small concessions (which cost us very little) while demanding highly valuable concessions from the prospect in return. This allows us to stay in reciprocity, keeping the prospect engaged, while protecting our core price and ultimately securing a vastly superior long-term deal 4, 6.

PART 4: MULTIPLE EQUIVALENT SIMULTANEOUS OFFERS (MESOs)

When we are trying to close a complex B2B partnership and the prospect is holding their cards close to their chest, we do not guess what they value most 17. Instead, we deploy Multiple Equivalent Simultaneous Offers (MESOs) 18.

Instead of presenting one rigid contract, we present Offer A, Offer B, and Offer C—each with wildly different prices and terms 18.

- **Offer A:** Lower monthly fee, but requires a long-term commitment (Prioritizes our cash-flow stability) 12.
- **Offer B:** Higher monthly fee, but includes premium "Done-For-You" support and exclusivity (Prioritizes our gross margin) 12.
- **Offer C:** Pay-as-you-go with maximum flexibility, but at our absolute highest premium rate (Prioritizes risk-compensation) 12.

By presenting these simultaneously, we demonstrate extreme flexibility and embed reciprocity into the pitch ("I'm just trying to figure out what works best for you") 17. Whichever option the Med Spa owner selects immediately reveals their true underlying motivations and priorities, allowing us to interlock the things that matter most to them with the things that matter most to us, creating a highly profitable, positive-sum outcome 12, 17, 19.
