

VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:

Product & Sales Strategy

SUBJECT: Pricing & De-Commoditization (The Grand Slam Ecosystem)

PURPOSE: To permanently remove Veluse Agency from the "race to the bottom" agency pricing wars. We will deploy Alex Hormozi's pricing psychology to create unparalleled perceived value, utilize extreme price anchors, and structure our Med Spa AI infrastructure as a "Category of One."

PART 1: COMMODITY VS. GRAND SLAM PRICING RULES

The fundamental rule of high-ticket business is that we do not compete on price; doing so is a one-way road to destruction 1.

The Commodity Trap: A commodity is a product or service that prospects can get from multiple places 2, 3. If a Med Spa owner views our service as "just another lead gen agency," they will compare us to competitors based on price 2, 3. In a commoditized market, businesses are forced to offer "a little more for a little less" until margins vanish and the owners are left barely keeping the lights on 3-5. There is zero strategic benefit to being the second cheapest in the marketplace 6, 7.

The Grand Slam Pricing Paradigm: A Grand Slam Offer is an offer presented to the marketplace that is impossible to compare to any other product 8, 9. Because it is entirely unique, it forces a value-driven purchase rather than a price-driven one 2, 9, 10.

- **The Moral Imperative of High Prices:** We have an obligation to charge premium prices. Lower prices attract demanding clients, generate lower emotional investment, and yield poor results 11, 12. Conversely, raising our prices increases the client's emotional investment, their adherence to our systems, and their ultimate success 13-15. Those who pay the most, pay the most attention 14, 15.

PART 2: THE "10X TO 1/10TH" THOUGHT EXERCISE

To systematically engineer our Grand Slam Offer delivery vehicles, we use the "10x to 1/10th" test 16, 17. This divergent thinking exercise forces us to step outside our operational comfort zone and brainstorm unparalleled value structures for our Med Spa clients.

- **The 10x Scenario:** Ask the team: *"If a Med Spa owner paid us 10 times our current price (e.g., \$100,000 instead of \$10,000), what exactly would we provide to make it unequivocally worth it?"* 16, 17. This forces us to brainstorm ultra-high-touch, "done-for-you" concierge elements—such as flying to their clinic, training their front desk staff in person, or installing customized AI hardware.
- **The 1/10th Scenario:** Ask the team: *"If they only paid us 1/10th the price (\$1,000), but we had to make our product even more valuable than it is now, how could we do it while maintaining our profit margins?"* 16, 17. This forces us to invent infinitely scalable, high-leverage assets—such as plug-and-play AI prompt templates, automated workflow software, or pre-recorded script mastery modules that cost us nothing to replicate 18, 19.

Execution: We list all these ideas, trim the high-cost/low-value items, and stack the high-value/low-cost (1/10th) items with select high-value/high-cost (10x) items to build an incomparable infrastructure package 19-21.

PART 3: PRICE ANCHORING & THE "GOLD MENU" STRATEGY

Human psychology dictates that people evaluate numbers relative to the first number they hear 22. If you start by stating a \$1,000 price and try to sell a \$100,000 package, it feels impossibly expensive 23. If you state \$100,000 first, a \$1,000 offer looks like loose change 23. We deploy absolute price anchoring across our sales architecture.

1. The "Gold Menu" Strategy (The Extreme Anchor) Inspired by Salt Bae's Nusr-Et Steakhouse, which sells a standard steak for \$90 but offers a gold-foil-wrapped steak for \$2,000 to \$3,000, we must build a "Gold Menu" tier 24.

- **The Rule:** Take the average price of our core offer and map out what a 10x, 50x, and 100x version would look like 25, 26. Create a wildly expensive, ultra-premium tier that you never even plan on selling 27.
- **The Psychological Effect:** Simply placing this astronomical price on the menu anchors the prospect's reality 27. Suddenly, our core high-ticket Med Spa offer no longer feels expensive; by comparison, it looks like a bargain 22, 27, 28.
- **The Whale Catch:** Even though it is designed as a decoy, roughly 10% of the market (the "whales") will buy the most expensive option simply because they want the ultimate status and access, instantly injecting massive capital into the agency 29, 30.

2. The Anchor Down-Sell (For Price Increases) When Veluse Agency needs to raise the price of a service package (e.g., moving from \$2,000 to \$3,000), we do not simply present the new \$3,000 price. We utilize the Anchor Down-Sell trick 31.

- **The Play:** We skip over the \$3,000 target and set our new price anchor at \$4,000 31, 32.
- **The Script:** The consultant states, *"The investment is \$4,000, which you can split into two payments of \$2,000."* (This gives the client the emotional comfort of their \$2,000 "home base" number) 31, 33, 34.
- **The Close:** *"However, if you want to prepay the whole thing today, I can apply a same-day savings and you just pay \$3,000"* 31, 33.
- **The Result:** We successfully raise our price to \$3,000, pull cash-flow forward through prepayment, and leave the prospect feeling like they secured a massive discount relative to the \$4,000 anchor 35-37.
