

VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:

Revenue Architecture & Enterprise Sales

SUBJECT: The "Menu Close" & Pricing Tier Architecture
PURPOSE: To establish Veluse Agency's elite protocol for structuring B2B pricing pages and executing high-ticket sales presentations. By weaponizing price anchoring and decoy pricing, we control prospect psychology, maximize our Average Order Value (AOV), and make our \$10,000 Med Spa AI-infrastructure core offer feel like an absolute steal.

PART 1: THE PSYCHOLOGY OF DECOY PRICING (THE POPCORN ANALOGY)

Pricing is not a reflection of cost; it is a psychological tool used to manufacture desire and dictate customer choice. To understand how we structure Veluse Agency's pricing tiers, we must look at the "Small, Medium, Large" soda and popcorn model used in movie theaters 1, 2.

If a theater prices a small soda at \$5, a medium at \$6, and a large at \$10, the vast majority of people will buy the medium 3, 4. However, if the theater wants to force customers to buy the large, they do not make the large cheaper; they change the price of the *medium* to act as a decoy 4, 5.

By pricing the small at \$5, the medium at \$9, and the large at \$10, the prospect looks at the menu and thinks, "For just one dollar more, I get twice as much! That is a great deal" 4-6. People fundamentally do not want to buy cheap things; they want to buy great deals 6. By strategically placing a decoy price immediately below our core high-ticket offer, we force the Med Spa prospect to logically conclude that upgrading to the most expensive tier is the only reasonable financial decision.

PART 2: THE \$100K ANCHOR (THE "GASP" RULE)

The most fatal error an agency can make is failing to establish a massive price anchor. At Veluse Agency, we mandate that every pricing page and sales pitch must feature an extremely expensive offer that we never even plan on selling 7.

If you tell a prospect the price is \$1,000, and then reveal your premium package is \$100,000, they will suffer sticker shock 1, 8. However, if you boldly state \$100,000 *first*, your core \$10,000 offer suddenly feels like a rounding error 8, 9.

The Rules of the Anchor:

- **The Gasps:** If you do not get an audible gasp from the prospect when you state your highest price tag, you did not go high enough 9, 10. The anchor must shatter their preconceived pricing expectations 11.
- **The 10x-100x Rule:** Take your core service and ask: *What would I have to provide to justify charging 10x, 50x, or 100x more?* 12, 13. Build that into a hypothetical "God-Tier" package.
- **Catching Whales:** While the primary purpose of the \$100K anchor is to make the \$10K offer look cheap, roughly 10% of the market simply wants to buy the most expensive thing available because that is who they are 10, 14. By placing a \$100K package on the menu, you will occasionally catch a whale who wires the money without blinking.

PART 3: THE "MENU CLOSE" ARCHITECTURE

When presenting our Med Spa AI infrastructure, we do not simply ask for \$10,000. We utilize the "Menu Close" to visually and psychologically corner the prospect into buying.

1. **Unsell & Prescribe:** Present the entire "menu" of everything required to achieve their ultimate dream outcome (the \$100K package) 15, 16. Tell them exactly what they do *not* need right now, physically crossing it off the list, and prescribe exactly what they *do* need 17, 18.
2. **The Takeaway (Feature Downsell):** If the prospect balks at the core price, we never negotiate our margins or blindly discount 19, 20. Instead, we point to the menu and say, "No worries. If you need to bring the price down, we can cross off the custom AI-booking bot and the automated lead nurture sequence. That brings it down to your budget" 15, 21.
3. **Loss Aversion:** By crossing features off the menu, the prospect viscerally feels the pain of losing the solution 15. Suddenly, paying the premium price becomes far more attractive than settling for a compromised, inferior outcome 15, 21.
4. **The A/B Choice:** Close by asking a preference question: "Would you prefer Option A (the full system) or Option B (the stripped-down version)?" 17, 18.

PART 4: THE VELUSE PRICING PAGE BLUEPRINT

Every Veluse Agency pricing page, proposal deck, and SaaS checkout flow must be structured in the following exact order to maximize psychological leverage:

- **Rule #1: Highest Price First.** Whether reading left-to-right or top-to-bottom, the most expensive tier must be the very first number the prospect sees 1, 22, 23. This sets the anchor immediately 1, 23.
- **Tier 1: "The Enterprise Sovereign" (\$100,000).**
- *Purpose:* The Anchor.
- *Features:* In-person corporate training, custom AI model training, lifetime exclusivity in their zip code, 24/7 dedicated Slack channel with the founders.
- **Tier 2: "The BioOps Growth Suite" (\$10,000 - The Core Offer).**
- *Purpose:* The Target.
- *Features:* The exact AI infrastructure and ad systems they need to scale.
- *Psychology:* Because they just read the \$100,000 price tag, \$10,000 looks like an absolute steal 8, 24. We add "Buy 10 Months, Get 2 Free" annual billing options here to push continuity 25.
- **Tier 3: "The Foundation" (\$8,500 - The Decoy).**
- *Purpose:* The Push.
- *Features:* A drastically stripped-down version of Tier 2, missing the core AI booking bot.
- *Psychology:* Priced just slightly below Tier 2, this acts as our "Medium Popcorn" 4, 5. The prospect sees that for merely \$1,500 more, they get the full, unlimited AI ecosystem in Tier 2, forcing them to upgrade 4, 5.
