

VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:

Systems Engineering & Fulfillment **SUBJECT:** The 'Delivery Cube' & Productization

PURPOSE: To establish Veluse Agency's operational mandate for transforming highly manual, bespoke agency services into a scalable, high-margin, tech-enabled infrastructure. If we rely solely on human labor to scale our Med Spa AI deployments, our margins will compress, and churn will destroy us. This SOP dictates how we use Alex Hormozi's "Delivery Cube" to productize our delivery, shifting our valuation from a traditional service business to a high-multiple Tech-Enabled Service.

PART 1: THE FOUNDATION OF WHAT WE SELL

Before we can productize our delivery, we must define the exact mechanisms of exchange. There are fundamentally five categories of things that can be sold, each existing in both a physical and digital format 1, 2.

1. **Products:** Physical items (e.g., skincare devices) or Digital items (e.g., PDF blueprints, software) 1.
2. **Services:** Physical labor (e.g., administering Botox, massaging) or Digital labor (e.g., media buying, running ads, configuring AI) 1, 2.
3. **Access:** Physical access (e.g., a lease to a building, a VIP Med Spa lounge) or Digital access (e.g., a private Skool community, a Slack channel with our executives) 2, 3. Access businesses have near 100% gross margins and scale effortlessly 4.
4. **Attention:** Physical attention (e.g., local billboards) or Digital attention (e.g., buying Google/Meta impressions) 2.
5. **Risk:** Physical insurance (e.g., property insurance) or Digital risk reversal (e.g., performance guarantees, cyber threat insurance) 2.

As Veluse scales, our ultimate goal is to pair our digital services (AI implementation) with digital access and digital products, creating a monopoly-like offering that cannot be commoditized 4, 5.

PART 2: THE "DELIVERY CUBE" VARIABLES

To construct a Grand Slam Offer that commands a premium price while remaining operationally light, we do not guess. We manipulate the six variables of the "Delivery Cube" to determine exactly *how* we will fulfill our promises to the client 6-8.

When engineering a new Med Spa deployment, Veluse strategists must evaluate these six dimensions:

1. Level of Personal Attention (The Ratio)

- *1-on-1:* Maximum perceived value, but completely unscalable 6, 7.
- *Small Group:* High value, semi-scalable (e.g., training 5 Med Spa owners at once) 6, 7.
- *1-to-Many:* Infinitely scalable, high margin (e.g., broadcasting a webinar or deploying a universal software update) 6, 7.

2. Level of Effort Expected

- *Do-It-Yourself (DIY):* The client figures it out on their own. This is the most scalable but holds the lowest perceived value 6, 7.
- *Done-With-You (DWY):* We provide the tools, but we hold their hand and teach them how to implement the system 6-8.

- *Done-For-You (DFY)*: We do 100% of the work. This is the most expensive to sell and holds the highest perceived value, but it is the hardest to fulfill and scale 6, 7, 9.

3. Delivery Environment / MediumIf we are delivering a live component, we must dictate the medium: In-person (highest value/lowest scale), phone, Zoom, email, text, or chat support 7-9.

4. Consumption FormatIf the delivery is recorded or asynchronous, how do they consume it? Audio, video, or written text 7-9.

5. Speed and Convenience (SLA)We must strictly define the boundaries of our availability. Are we offering 24/7 support or strictly 9-to-5? Are we guaranteeing a 5-minute response time or a 24-hour response time? 7, 8, 10. Fast beats free; people will always pay a premium for speed 11.

6. The 10x to 1/10th TestTo stretch our operational creativity, we ask two polar opposite questions:

- *The 10x Test*: If the Med Spa paid us 10 times our normal price (\$100,000), what insane, white-glove delivery would we provide? 8, 12, 13.
- *The 1/10th Test*: If they paid us 1/10th the price, how could we restructure our delivery to still guarantee they get the result, but with virtually zero cost to us? 8, 12, 13.

PART 3: THE PRODUCTIZATION MATRIX (MANUAL AGENCY TO TECH-ENABLED)

Traditional marketing agencies are slow, low-margin, and highly dependent on human labor, which makes them difficult to scale and less valuable to acquire 4, 14. To transition Veluse Agency from a manual service into a "Tech-Enabled Service" that commands a massive enterprise multiple, we must execute the following step-by-step matrix 14, 15.

Step 1: Eliminate Bespoke Delivery (Productize)The enemy of scale is customization. If a client says, "Build me whatever I want," operational drag skyrockets. We must transition to a standardized model: *"You probably want this problem solved. We solve it in one of three ways. This is the way that is best for you, and here is how we do it."* 16. Doing the exact same thing 100 times yields far more leverage and operational efficiency than doing 100 different things one time 17.

Step 2: Execute the "Trim & Stack"We take the massive list of potential solutions generated by the Delivery Cube and aggressively trim. We immediately remove anything that is high-cost and low-value 18, 19. We retain items that are low-cost/high-value, and we selectively keep high-cost/high-value items ONLY for massive, premium value-adds 19-21.

Step 3: Build "One-to-Many" AssetsTo drive our margins toward 100%, we must replace repetitive human labor with one-to-many solutions 19, 22. If our team is manually auditing front-desk scripts for every Med Spa, we must build a definitive Video Training Course or AI-Prompt that does it instantly. These solutions require a high one-time cost of creation but require infinitely low additional effort to distribute forever 19, 21.

Step 4: Deconstruct the "Unicorn" (Workflow vs. Role Expansion)As we scale, we cannot rely on finding "unicorn" employees who know how to do everything 23. To build a scalable machine, we must chop the unicorn's horn off and assemble the component parts: a horse, a rhinoceros horn, and fireflies for glitter 24.

Furthermore, going into 2026, we must shift from a *roles-based* expansion to a *workflow-based* expansion 25, 26. We document every micro-step of a process, demonstrate it, and then assign specific, narrow workflows to specialized sub-agents or

offshore talent equipped with AI 26-28. We give them AI to gain a 10x leverage on their output, turning our manual delivery into an automated, high-margin, self-licking ice cream cone 27, 29, 30.

By relentlessly executing this matrix, Veluse Agency ceases to be a standard vendor trading hours for dollars. We become an unassailable Tech-Enabled Service, delivering 10x the value of a traditional agency at a fraction of the fulfillment cost 14, 31.
