

VELUSE AGENCY STANDARD OPERATING PROCEDURE (SOP) DEPARTMENT:

Executive Operations & Talent Acquisition **SUBJECT:** Team Building & Operational Leverage (The 'Champion' Recruitment SOP) **PURPOSE:** To establish Veluse Agency's elite standards for sourcing, vetting, and managing top-tier human capital. A business's potential is strictly capped by the aggregate skill set of the people contained within it 1. We cannot scale Veluse Agency or our Med Spa clients by hiring people who need to be taught how to run; we must build a machine that attracts "Champions" who have already won an Olympic gold and want to win another one with us 2.

PART 1: THE "CHAMPION" VETTING PROTOCOL

The biggest cost in any business is hiring incorrectly—you waste time finding them, training them, and suffering through lost growth before having to start over 3. To mitigate this, Veluse Agency systematically screens for A-Players ("Champions") using strict, metric-driven vetting processes.

1. The "Smallest Skill Deficiency" Rule: When recruiting, we never hire for "potential" in high-level roles; we hire for the lowest skill deficiency 4. We identify the exact skills missing in the company and find the person who possesses them, ensuring the fastest ramp-up time and the highest return on investment 5.

2. The Litmus Test Questions: To verify if a candidate is a true Champion, we do not ask vague behavioral questions. We mandate these specific inquiries during the interview:

- **"What metrics do you track?"** The quality and quantity of the metrics a candidate uses to explain their past roles is directly correlated with how good they are at their job 6, 7. If an HR candidate knows their "cost to acquire talent," "time to fill," and "90-day two-way fit," they are elite 8.
- **"How does what you do make the company more money?"** If a candidate cannot directly tie their daily activities to the revenue generation or profit of the business, they will not drive growth for Veluse 6, 9.
- **"Do they raise the average bar?"** After the interview, leadership must ask: *Does this person raise the average bar of the team they are joining?* 10, 11. If they do not, we pass. Consistently hiring people who raise the bar ensures the company compounds in intelligence; hiring below the bar dilutes the talent pool into mediocrity 12, 13.

PART 2: THE TALENT GRID (SKILL VS. WILL & THE 3 LEVELS)

To accurately grade our team and place people in the right seats, we evaluate talent across two different frameworks: The Will/Skill Matrix and The 3 Levels of Evolution.

The Will vs. Skill Matrix: When reviewing a team member's performance, we break it down into two building blocks: Willpower and Skill set 14, 15.

- **Skill** is their technical ability (e.g., coding, closing sales, negotiating) 15.
- **Willpower** is their ability to execute under pressure, hit strict deadlines, and handle reluctant or chaotic environments without breaking 15. We will often find employees whose skill set is low, but their willpower is unbreakable, or vice versa 15. We must identify which block is deficient and actively train to increase it, building their willpower through small, consistent victories 16.

The 3 Levels of Talent Evolution: As talent progresses within Veluse Agency, they must ascend through a specific 9-grid matrix of operational leverage 17.

- **Level 1: Doing (Individual Contributor).** The employee is focused on *what* to do 18. They spend 100% of their time executing the tasks 18.
- **Level 2: Teaching (Manager).** The employee shifts to understanding *how* the work is done 19. They manage others, ensuring the team consistently executes the skill at a high level 19.
- **Level 3: Leading (Systematizer).** The true leader focuses on *who* 20. They are no longer doing or teaching; they are systematizing. They build the machine that builds the machine, creating an infrastructure that recreates the skill flawlessly in others without their direct involvement 21, 22.

PART 3: INTERVIEWING FOR "FRUSTRATION TOLERANCE"

In Med Spa sales and AI infrastructure integration, employees will face massive repetition and rejection. To succeed, they must possess high "Frustration Tolerance"—the ability to do the same thing repeatedly without immediate reward and keep going 23.

How to Identify Obsession and Tolerance in Interviews:

1. **The "Extracurricular" Question:** We ask candidates, "*What are your extracurricular activities?*" or "*What are you obsessed with?*" 24. If we are hiring a Med Spa content creator, and they respond that they spend their weekends obsessively studying lighting, audio, and YouTube hooks, we know they are applying their discretionary effort to their craft 24, 25. This proves they have the inherent frustration tolerance to endure the boring work required to achieve mastery 26, 27.
2. **Group Interview Stress Tests:** For high-volume roles like outbound sales, we avoid 1-on-1 resume screening and deploy Group Interviews 28. We put multiple candidates on a call and give them 1 to 2 minutes to speak 29, 30. This environment instantly reveals who is assertive, who communicates clearly under social pressure, and who encourages others when they are nervous 28.

PART 4: THE "HIGHEST STANDARD" DECISION-MAKING RULE

The single rule that dictates leadership at Veluse Agency and within our Med Spa clients' businesses is this: **The person with the highest standard must be in charge** 31-34.

The Execution of the Rule:

- Leadership is not dictated by seniority, tenure, who holds the most shares, or who founded the company 32, 33.
- If there is a junior employee, or a newly hired manager, who possesses a lower tolerance for mediocrity and a higher standard for excellence than the current CEO or founder, that employee must be put in charge of that department immediately 31, 32.
- When a leader demands more from themselves than anyone else in the market does, their standards become the "source" of reality for the organization, pulling the entire business up into rarified air 33, 35, 36. We never apologize for holding unreasonable standards; unreasonable standards are the only path to unreasonable returns 37, 38.
